

Eric Wrights Civil Engineering Ltd (Pontoon Hire)

We were approached by Tom Steel from Eric Wright CE Ltd. with a problem he needed solving. He had a job replacing the water valves on a reservoir which couldn't be drained and required the use of divers to carry out the repairs.

His problem was, the divers needed to work around the clock so required full welfare facilities and enough power on demand to power both all the welfare equipment and the emergency decompression chamber which needed to be on-hand, all of which needed to be sited on a floating pontoon in the middle of the reservoir. Obviously weight was an obstacle and also the risk of contamination from foul waste and diesel oil spillages too.

After careful consideration Garic Ltd came up with the answer. If we supplied several self contained units as opposed to one large unit, this would not only spread the weight out evenly over the whole pontoon, but also protect the reservoir against contamination. Our solution was to supply one of our fully self contained solar-powered single toilet blocks 'Solarloo', which has integral waste and water tanks, a fully enclosed bundled 'Powerstore' unit which is a super silent generator with long range fuel tank enclosed inside a 10ft steel container and a '20ft x 8ft open plan' steel canteen unit with the heating, lighting and all other electrics powered from the 'Powerstore' unit.

Additionally, as part of our commitment to customer services, we arranged to attend site on an agreed date and time when the pontoon was pulled ashore and our customer service vehicle was on hand to hygienically remove the foul waste and replenish the drinking water and consumables.

Tom was very pleased with the way in which we provided the solution to his problem and said that he would definitely use us next time.

If you have a situation which requires a solution that is a little out of the ordinary then give us a call, we are no ordinary hire company and are always ready to listen.
