

# Pennine Vibropiling Balfour Beatty Ground Engineering (BBGE)

**We were approached by Pennine Vibropiling part of BBGE to discuss the possibility of building them a number of towable welfare units bespoke to their specific requirements. After the initial meeting with BBGE and our prototypes team we established that they required a unit that was not only practical but also eco friendly.**

After some consideration by ourselves we came up with a design which utilised some of our latest 12v Eco Solar cabin technology for power which we adapted to work alongside BBGE's specific requirements. This gave them a range of bespoke cabins which provided them with all the welfare, office and storage that they required in a low carbon footprint self-powered towable cabin.

As well as the innovative power solutions we gave them we also solved other issues which BBGE were having with the existing units they used. We adapted the towing hitches on the new units so that they could couple up easily. We also developed a jack leg on the tow hitch that swung around on a pivot to enable them to fold it away, so that it didn't catch on the beaver tail when they loaded it for transport.

BBGE/Pennine have been very happy with these units and have been using them for many years now, they have just come back to us recently to give us the contract to fully refurbish them so that they will last many more years.

**Garic Ltd are specialists manufacturers in bespoke built welfare cabins and are happy to meet with anybody to discuss their specific requirements in order to come up with a design and quotation.**
