

INTERCEPTOR DRIP TRAYS

instant environmental protection from leaks and spillages

drip trays, wash bays and drum stores

'BARREL FARM' PROTECTION

Combine a number of Interceptor Drip Trays to create a safe area when storing a large number of containers.

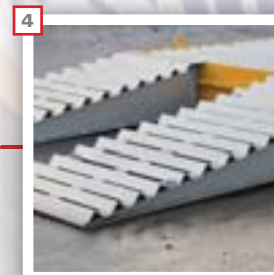

The **Garic** drip tray is the **only patented system** that allows rainwater to pass through, but hold back oil/fuel or oil-based chemicals.

The idea behind our interceptor drip tray is **simple yet effective**, as it requires no special filters or chemicals. The tray's effectiveness is based solely on the knowledge that oil floats on water.

On initial start up the main area of the drip tray requires two inches of water in the base so that any oil/fuel spilt in the tray will naturally separate from the water. The water is passed through the interceptor outlet hole. There is a sight gauge, which allows you to monitor the amount of oil present and then dispose of it at a licensed disposal site.

- 1 The easy to read gauge makes using the **interceptor drip tray** simple and straightforward.
- 2 Built-in overflow, ensures no oil escapes even in the event of heavy overnight rain.
- 3 Position the **interceptor drip tray** using the steel lifting rings.
- 4 Use the optional ramps to manoeuvre wheeled or tracked plant onto the **interceptor drip tray**.

one interceptor, many applications

DRUM STORE INTERCEPTOR

Store a range of drums and gas bottles in a secure environment safe in the knowledge that any leaks will be contained by the built in drip tray.

DRIP TRAY

The world's only Interceptor Drip Tray with a patented protection system that safeguards any unbanded equipment such as generators, pumps, compressors, drums and tanks.

WASH BAY / BREAKER INTERCEPTOR

An evolution of the Interceptor Drip Tray, a simple redesign of specification provides the perfect solution to the problem of oil/grease and fuel from entering your drains at the wash bay. Equipment can be placed by lifting or via optional entry ramp.
